

Artwork Guidelines for Printed Plaques:

3/8" AGE Acrylic (glass edge)

- ★ The AGE plaque sign edge is flame treated to produce a smooth glass-like appearance. Artwork is reverse printed to 3/8" acrylic and the sign is CNC router-cut. A minimum area of 1", clear of artwork (ink), is required around all sides of the sign for the flame treatment process.

Client supplied artwork must fit the print area as indicated in the example below: an 11" x 17" sign will require 9" x 15" artwork. Supplied artwork should be high resolution JPEG (300 dpi).

The AGE plaque can be made to any size. If you would like a larger clear glass perimeter, please specify in the comments and make sure that your artwork fits the print area accordingly.
